

AI MARKET SUMMARY 2025 & OUTLOOK FOR 2026

Trends and predictions shaping
artificial intelligence growth

Prepared by Joanna Bojko
December 2025

Why AI Is Different Than Everything Before

- **Fastest adoption in human history**

Billions of users in months, not decades.

- **Universal disruption**

Every industry. Every role. Every company.

- **Automation of thinking itself**

Not muscle. Not clicks. Cognition.

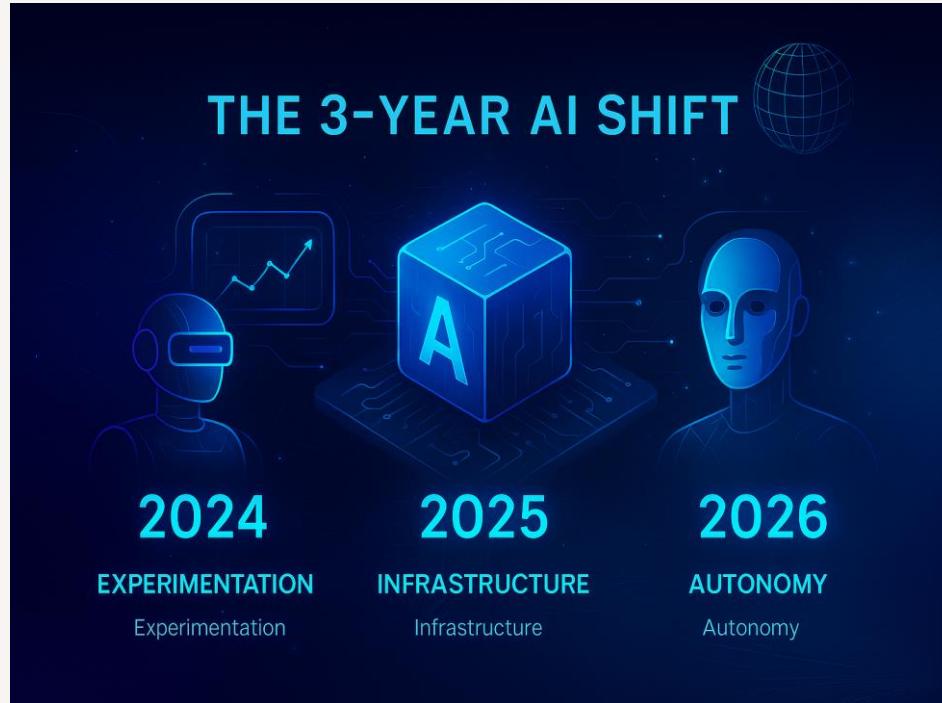

- **Self-accelerating loop**

Data → Feedback → Better Models → More Data.

- **Speed beats regulation**

Progress moves faster than laws, org charts, and culture.

AI Market Evolution (2024–2026) in One Line per Year

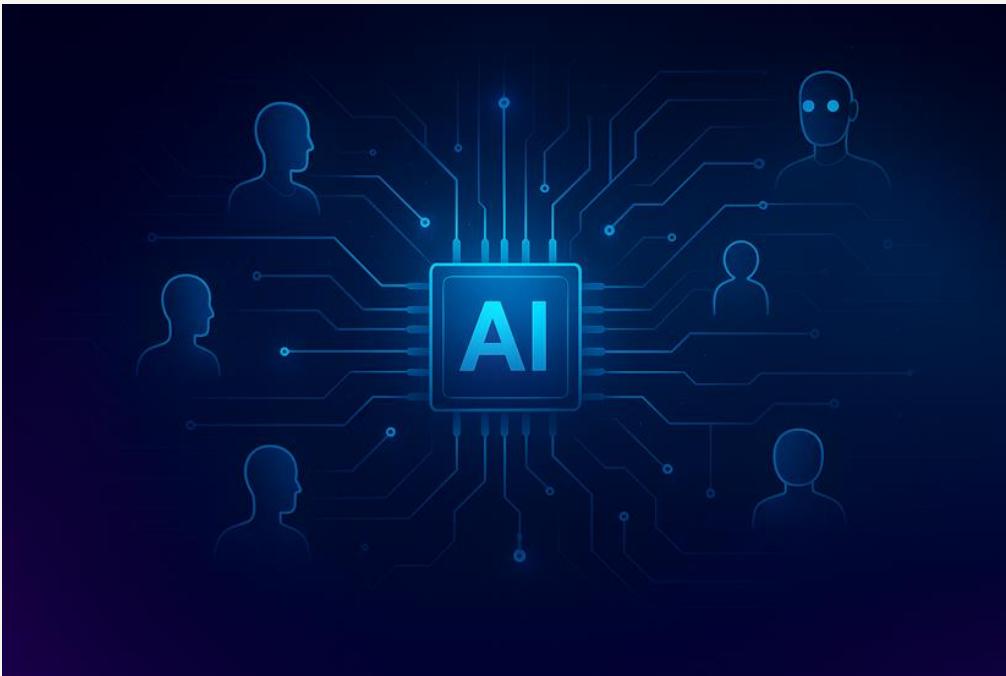

- **The 3-Year AI Shift**
- **2024 — Experimentation**
 - “Can this work?”
Pilots, hype, massive models, chaos.
- **2025 — Infrastructure**
 - “We can’t operate without it.”
AI embedded everywhere. Regulation catches up. Consolidation begins.
- **2026 — Autonomy**
 - “AI works while you sleep.”
Agents execute goals, not prompts.
 - Every company that survives 2026 will run on AI by default.

Key Trends in 2025

- **Specialized Models > Big Models**
Proprietary data wins. General models commoditize.
- **AI Agents, Not Chatbots**
Multi-step execution replaces Q&A.
- **Multimodal by Default**
Text-only is already legacy.
- **AI Inside Business Systems**
CRM, BI, DevOps, HR — invisible but critical.
- **Governance Becomes a Feature**
Trust, auditability, compliance = competitive advantage.

Reality as a Service - Shadow AI in 2025

What's Different in 2025

- Real-time voice cloning
- Live video deepfakes
- AI-generated “evidence” (screenshots, messages, recordings)
- Attacks targeted at individuals, not just public figures

The Invisible Use of AI

- **Deepfakes at scale**
Voice, video and face cloning available to anyone
- **Identity without identity**
You can appear online without ever being there
- **Perfect impersonation**
AI mimics tone, emotions, hesitation — not just words
- **Zero-cost manipulation**
Scams and misinformation automated
- **Truth becomes probabilistic**
Seeing and hearing is no longer believing
- AI moved from creating content to creating believable reality.

2026+: What Changes for Real

- **Autonomous AI Workers**

AI becomes a junior–mid level employee, not a tool.

- **AI + Robotics**

Digital intelligence moves into the physical world.

- **Conversation-Driven Ops**

You don't manage systems — you talk to them.

- **Local & Private AI**

Privacy + customization beat cloud-only approaches.

AI Market Comparison Table (2024–2026)

Category	2024	2025	2026 (forecast)
Global AI Market Size	~\$190–210B	~\$240–260B	~\$300–350B
Enterprise Adoption	Early mass adoption; pilots → workflows	Broad integration into daily processes	AI fully embedded; high automation
Dominant AI Models	GPT-4.1, Claude 3, Gemini 1.5	GPT-5/5.1, Claude 3.5, Gemini 2	GPT-6-class, advanced multimodal agents
Number of New Major AI Models Released	~45–60	~60–80	~80–100
Model Capabilities	Good reasoning & generation	Improved planning, long-context, multimodal reasoning	Reliable autonomous agents, long-horizon tasks
Hardware & Compute	Nvidia H100 era	H200/B200, custom accelerators	Specialized inference hardware, on-device AI standard
Startups & Funding	Strong but selective VC	Peak funding; consolidation begins	Mature market; fewer but stronger players
Regulation	EU AI Act finalized; global frameworks forming	Compliance enters mainstream	Mature safety audits & global alignment
Consumer Adoption	Mainstream assistants	AI built into OS/apps by default	Device-wide persistent agents
Business Impact	Noticeable productivity boost	Automation of routine cognitive tasks	Workflow restructuring across industries
Key Trend	"Generative AI breakthrough"	"AI as infrastructure"	"Autonomous AI agents"

- Models are stabilizing, value moves to execution
- Hardware & inference become strategic bottlenecks
- Winners are fewer — but much bigger

The Real Strategic Choice

- Stop experimenting. Start integrating.
- Build internal AI capability, not just vendors.
- Design workflows assuming AI is always present.
- Prepare org structures for autonomous agents.

You won't be replaced by AI.

You'll be replaced by someone who uses it.
